Tropical Medicine: A Clinical Text, 8th Edition, Revised And Expanded (International Humanitarian Affairs)

Synopsis

The history of tropical medicine is as dramatic as the story of humankind. It has its own myths and legends, including tales of epidemics that destroyed whole civilizations. Today, with silent stealth, tropical diseases still claim more lives than all the current wars combined. Having had the privilege of working throughout Africa, Asia, and Latin America, as well as in the great medical centers of Europe and the United States, the author presents the details essential for understanding pathogenesis, clinical manifestations, therapy, and prevention of the major tropical diseases. The text, now in its eighth edition, has been used for half a century by medical students, practicing physicians, and public health workers around the world. This fascinating book should also be of interest to a broad, nonmedical readership interested in world affairs. All royalties from the sale of this book go to the training of humanitarian workers.

Book Information

Series: International Humanitarian Affairs

Paperback: 322 pages

Publisher: Fordham University Press; 8 edition (September 2, 2011)

Language: English

Customer Reviews

“Diplomats who must deal with the after-effects of man-made and natural disasters are well aware that epidemic diseases flourish as societies collapse, and that more people usually die in such circumstances from preventable illnesses than from armed conflicts. This is an essential book for those who seek to restore peace and stability in war-torn and disaster areas. It considers the critical interrelationships of medicine and statesmanship, and it is one of the reasons why I have asked the author to serve as my Chief Adviser on Humanitarian and Public Health issues.”

(H.E. Nassir Al Nasser President, United Nations General Assembly, Sixty-sixth Session)“This revised and expanded edition of Tropical Medicine: A Clinical Text reflects the personal experience of the author over many years of direct and intimate contact with countries in the Third World, ranging from those in Africa to those in South America. It has been the standard textbook used by many generations of both medical students and postgraduate physicians studying tropical medicine at the Royal College of Surgeons in Ireland and in other academic centers around the world. It is a practical and very readable textbook.” (Herbert Gilles, M.D., C.M.G. Professor Emeritus, The Liverpool School of Tropical Medicine; Past President, The Royal Society of Tropical Medicine and Hygiene). . . A 'must' for any medical collection. It provides a world history of tropical medicine approaches and comes from a doctor who himself has worked throughout the world in both Third World and developed countries.” (California Bookwatch)

Kevin M. Cahill, M.D. is University Professor and Director of Fordham University's Institute of International Humanitarian Affairs (IIHA). He also serves as President of the Center for International Humanitarian Cooperation (CIHC), Director of the Tropical Disease Center at Lenox Hill Hospital, Clinical Professor of Tropical Medicine and Molecular Parasitology at New York University School of Medicine, Chief Medical Advisor for Counterterrorism, NYPD, Professor of International Humanitarian Affairs at the Royal College of Surgeons in Ireland, and Senior Consultant to the United Nations Health Service. Dr. Cahill has served as Chief Advisor on Humanitarian Affairs and Public Health for three Presidents of the United Nations General Assembly.

I love the jungle and the tropics. Still, watch Naked and Afraid to see just what a cruel place it can be to exist in. Makes me have a great deal more respect for primitive South American tribes who can live in this veritable green hell. This book does a superb job of documenting the various medical hells that can befall those who enter its deadly environment for all but the briefest amount of time. My summary of how to best avoid the hell that can await you is: 1. Boil the water for at least 5 minutes before you drink it. Better yet, take your own water. 2. Cover yourself with long pants and long sleeved shirts and use lots of DEET! 3. Go on vacations where you enter the jungle early in the morning and head for a comfortable bed which is protected with mosquito netting each evening before dark. The tropics are fascinating, especially when seen from a chair in your living room watching some Nat Geo special about wildest wherever. If you're under 40 - be sure to go and experience the jungle. My favorite place: Costa Rica. Have fun and get this book in hardcover. If you

fall ill after you return from the tropics, you will know from having read this book that your doctor back home won't know squat about tropical medicine. If something weird attacks you as a result of your trip to the tropics, pray the doctor will examine this book and get a clue! Have fun but realize there are things in that jungle that can make your life hell.

Here's the thinking behind the treatment of tropical diseases.

Interesting read.

I am a physician and went to Africa on a medical mission trip. I reviewed 4 medical textbooks on tropical medicine and this was my favorite. I read it front to back. It is straightforward and covers all the expected tropical diseases in an orderly fashion. It is easy to read and had appropriate illustrations. Great text, I heartily recommend it.

If you're going there? Never seen before? My copy was referenced I assure you!!
