Handbook Of Forensic Pathology, Second Edition

Synopsis

Handbook of Forensic Pathology, Second Edition is an up-to-date, concise manual illustrating all core aspects of modern forensic pathology. This edition retains the outline format of the original, which allows for quick access and rapid assimilation. Written in no-nonsense, easily understandable language, this precise and thorough yet compact resource contains extensively detailed entries from two of the nation's foremost authorities on gunshot wounds and forensic pathology. With numerous instructional charts and diagrams and color photographs, it organizes a wealth of instructional and immediately applicable information. Features of the second edition include a chapter on nursing home death, added information on gunshot residue, and research on tasers, pepper spray, and excited delirium syndrome. Introducing medicolegal casework and documentation, this book explains protocols for the collection and recovery of evidence and DNA analysis and lists factors used to determine time of death and identity of the deceased. It identifies the natural causes of death in children and adults before devoting the remaining chapters to the myriad of non-natural causes including homicide, suicide, accidental, and undetermined. With meticulous detail and instant access to extensive information, this handbook is an indispensable tool for forensic pathologists, law enforcement, and legal personnel, as well as pathologists in training.

Customer Reviews

Very informative

its black and white book with colored images in the middle pages quality is not as other international books very expensive to the quality offered but for the info ... it's worth it its book of notes ... very good

This was the best text book I've ever had. It's in an outline format, which was great. It was straight to the point and left out all the extra opinions that authors felt they need to put in text books. It's easy to read and learn from since it's in an outline format.

As advertised.

My wife needed this book for her CMI-III course. Thanks to the material (and a lot of hard work on her part), she achieved her certification.

My primary text book was a very high level book that appeared as if it were written for experienced medical professionals. This text book covered almost the exact same information but was written in a manner that those outside of the medical profession could easily follow along with and comprehend.

This book helped get me a 4.0 GPA in "Death Scene Investigations" at our local community college. A great read for a textbook!

Thanks to books like this and , I am now a Criminalist without being broke.
