## Customer Reviews

Great information great pictures. Definitely recommend!

This is a kit that includes a 20 piece skeleton with stand as well as a book. The skeleton is plastic and once put together its not really one to play with, more of one just to display as it doesn't stay together really when moved. It is great though for kids to see what the bones look like and where they go. My kids are young now but I think when they are older and learning about bones in science, this will be a great reference. To give you an idea of size, its maybe 8 inches tall. The book though is really awesome and features 125 pages of activities. Kids can write throughout the book and complete various activities. There are facts throughout this book that feature a little of everything science-related. I think we will start reading this book every night just to give my kids

facts to soak in. There is so much packed in it with health and science. I really like this book as an adult and there is so much I didn't even know! I received this to review in exchange for sharing my honest opinion.

I bought this for my almost 4 year old daughter and my 8 year old niece. I wanted a book with lots of colorful pictures and this definitely fulfilled that requirement! The price is amazing being the quality of the photos and information, and being a hardcover book. Very pleased with this purchase!

A fun and educational book. My 9 year old really enjoyed exploring this book with me.

Great book, arrived on time, and I have found that all the discovery kids books are great. I use it to read with my grandkids, and I am learning lots as well.

This book is great! My 4 year old son loves learning about the human body, this book was very informative and the pictures were fun and helped him understand what I was reading to him and how his little body works!

This book is fascinating. We bought it for our children, but I think we look at it more than they do.

Excellent book for kids
